📄 SUMMARY

Cybersecurity enthusiast with basic knowledge of SOC operations, threat monitoring, log analysis, SIEM tools, and network security concepts. Familiar with OWASP Top 10, web application security, and Python automation. Passionate about learning cybersecurity technologies and improving threat detection and incident response skills.

🧠 SKILLS

- Linux
- Web Application Security
- Log Analysis
- Digital Forensics (Basic)
- Network Security
- OWASP Top 10
- Web Development
- Threat Detection & Vulnerability Scanning
- Vulnerability Assessment & Penetration Testing
- Python
- SIEM Basic

🔧 TOOLS

- Burp Suite
- Wireshark
- Nmap
- OWASP ZAP
- Metasploit
- Nikto
- splunk

📁 PROJECTS

Ransomware Honeypot

- Built a ransomware honeypot system to monitor file system activity and simulate real-world ransomware attacks
- Detected malicious encryption behavior, automatically isolated the attacking process, and prevented further file damage
- Restored encrypted files from secure backups and removed malicious files to recover the system state

DNS Traffic Monitoring & Analysis

- Built a DNS Traffic Monitoring & Analysis Tool to monitor DNS requests, analyze network traffic, and identify suspicious or malicious domain activity for basic threat detection and security analysis.

Website Development Project

- Built a full-stack course website with authentication, course pages, and a real-time news section using external API integration
- Implemented secure user authentication with hashed passwords and session-based login management
- Developed backend using Node.js and EJS with MySQL database for storing user and application data, and built responsive frontend using HTML, CSS, and JavaScript.

Web Application Penetration Testing Tool

- Built a basic web application penetration testing tool to detect vulnerabilities such as SQL Injection (SQLi), Cross-Site Scripting (XSS), SSRF, broken access control, outdated software, and cryptographic weaknesses.
- Implemented automated scanning techniques including payload injection, endpoint probing, and application availability checks to identify potential security flaws.
- Designed modular testing components to perform targeted vulnerability checks, improving the speed and consistency of initial security assessments.

📜 CERTIFICATES

- Fundamental of CyberSecurity (Zscaler)
- Web Security (Infosys Springboard)
- Introduction to Digital Forensics (Cyber 5w Academy)
- Fundamental of AI Security (Zscaler)
- Network Security Essentials (Infosys Springboard)
- Introduction to CyberSecurity (Cisco)
- Fundamental of Network for Cyber Professionals (Zscaler)
- Introduction to Cloud Computing (Infosys Springboard)

🎓 EDUCATION

Higher Secondary (11th-12th), Swami Vivekananda Higher Secondary School
81%

B.E.CSE (Cyber Security), SSM Institute of Engineering & Technology 🎓
CGPA : 7.4
